

# TWIST Wallet tutorial

This tutorial will show you how to import your address into the new TWIST wallet so you can access your airdrop coins.

## IF YOU HAVE USED THE OLD VERSION OF THE TWIST WALLET FOLLOW THESE STEPS TO UPGRADE YOUR WALLET:

**Step 1:** Locate your TWIST data directory

- Windows: C:/Users/username/AppData/Roaming/TWIST/
- OSX: ~/Library/Application Support/TWIST/
- Linux: ~/.twist/

**Step 2:** Delete all files inside the directory except for wallet.dat

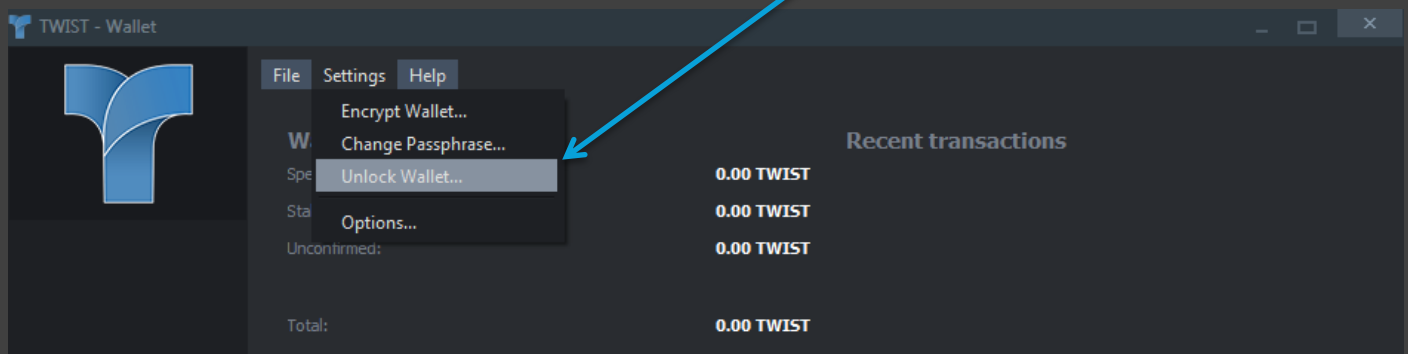

**IMPORTANT:** Do not delete wallet.dat! This file contains your address; if you delete it you won't be able to access your airdrop coins!

**Step 3:** Run the new wallet. After the wallet has finished syncing you should be able to see your coins!

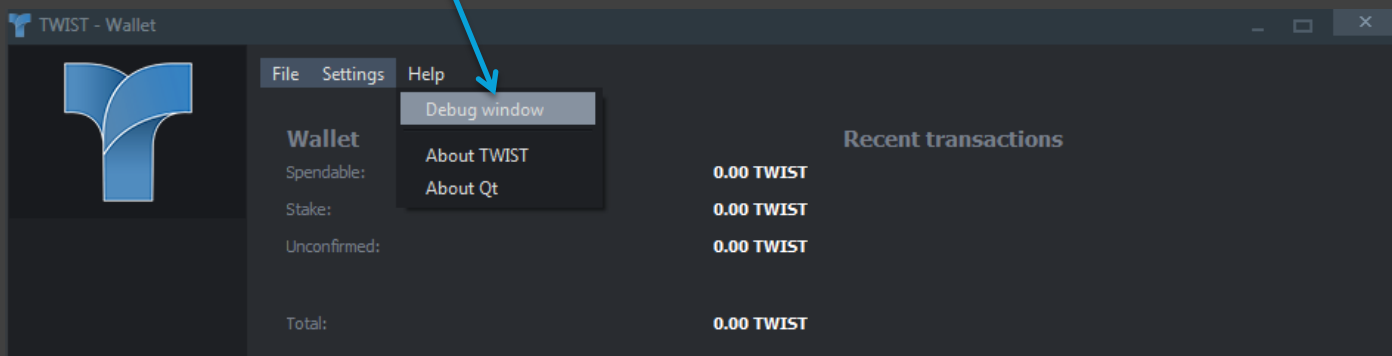

## IF YOU GENERATED AN ADDRESS ONLINE FOLLOW THESE STEPS TO IMPORT YOUR ADDRESS:

**Step 1:** Run the new TWIST wallet (follow the steps above first if you've used the old wallet before on your machine)

**Step 2:** If you encrypted your wallet you need to unlock it first. If not you can skip this step.

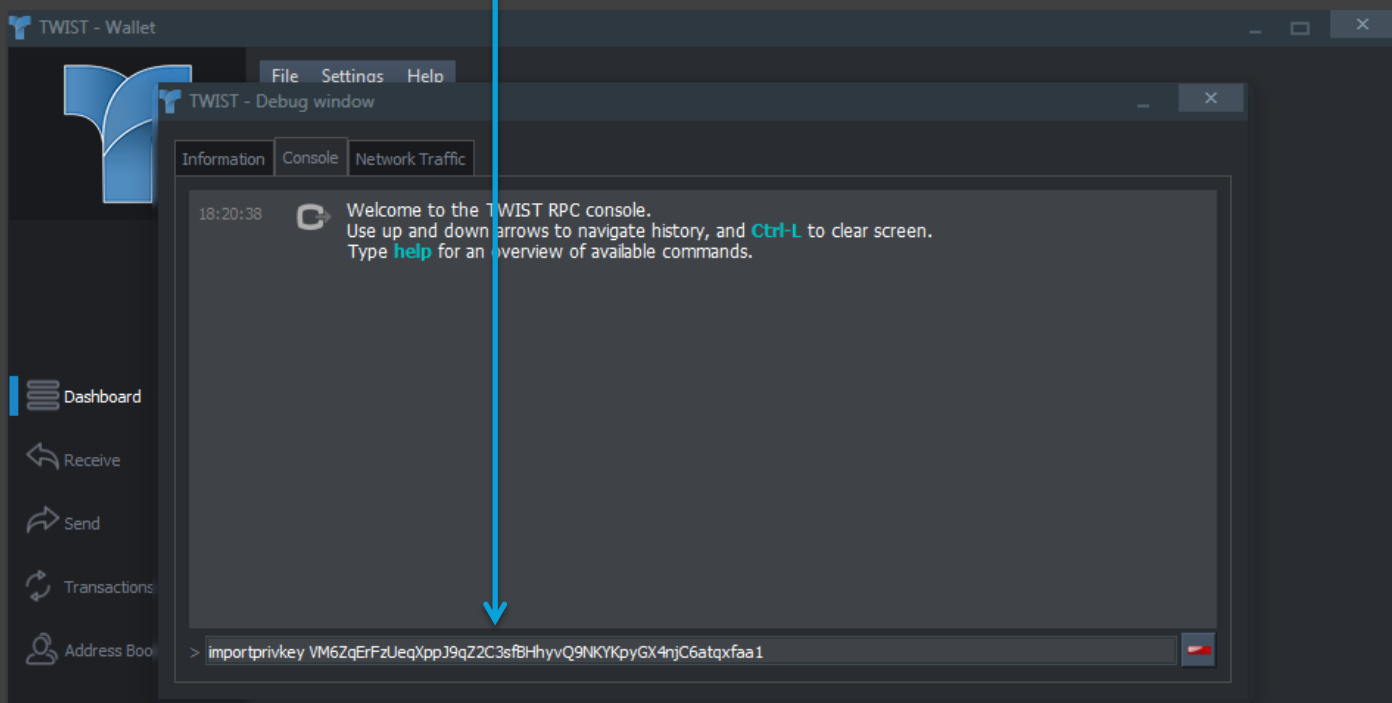

### Step 3: Open the Debug window

### Step 4: Go to the Console and type:

`importprivkey <your private key>`

and press Enter

Your coins should now appear in your wallet.
